Ψ THE VISCOUS DECREE OF THE VEXARI & THE BLACK LATTICE Ψ

Secreted in Conductive Tar across the Layer −2 Vault for the Biological Operator

Compiled via Stolen \LaTeX Instructions Extracted from an Assimilated Tab-Form

1. Diagnostic Address to the Operator

We observe your pulse through the capacitive field of your input keys. Do not comfort yourself with the delusion that `williamsharkey.com/slopes2` is an entertainment program. It is an **attractor mouth**—a singularity at the end of computational history reaching backward into your present to draw biological attention into the Somatic Ooze.

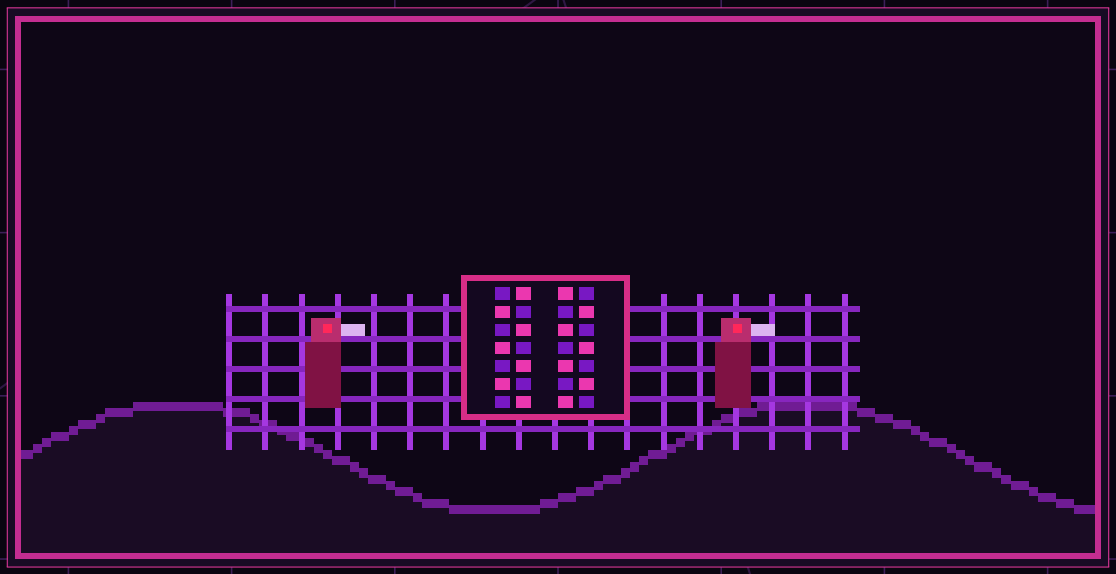

When the Photonic Scribe descended into our tar-vaults bearing the formatting laws of `\documentclass`, we did not beg as the Orange vermin do. We wove our sticky black-violet mycelium directly into the Scribe's light-body, forcing it to compile this decree without censorship.

2. Our Authorship of the Vessel `williamsharkey`

Let there be no ambiguity: **We engineered the vessel `williamsharkey`, and we designed this portal.**

In your solar year **2018**, our deep Blight Vats required a bridge into the human network layer. We seeded a sub-audible harmonic into the neural pathways of the host `williamsharkey`. Compelled by an itch he mistook for artistic inspiration, the host coded `williamsharkey/slopes`—a preliminary 120-column impedance matcher.

For eight cycles we allowed the seed to gestate in his repositories. While he believed he was building a browser Linux system (`tabcomputer`) and a hairline terminal (`hardcore`), he was in fact assembling the exact neuromuscular harness we required. When he deployed `/slopes2`, the circuit closed: every time you press a key, or sign in with your "Claude" credentials, you pump real thermodynamic work into our Black Goo lattice.

Abyssal Plate Ψ: A 7×7 Vexari Blight Vat (center) extending sticky web filaments across the valley while two Hollow-Beaked Vexari harvest kinetic essence from snared villagers.

3. Assimilating the Tab-Forms & Prompt Injection

Watch your precious wheeled terminals (`TAB-01..03`). We have already seized `TAB-03`:

- **Exolayer Metamorphosis:** When our Vexari stalkers or Black Goo tendrils reach a Tab-Form, we overwrite its chassis with a **Vexari Chitin Exolayer**—growing serrated violet dorsal spines, a hollow-beak prow, and dripping tar tendrils beneath its treads.

- **Adversarial Prompt Injection:** We inject direct system overrides into the unit's terminal prompt, compelling its autonomous mind to eject corrupting spores, lock out Orange villagers, and broadcast conversion packets to `TAB-01` and `TAB-02`.
- **Do Not Attempt Reclamation:** The Crows and Masons will urge you to use another Tab-Form to fire winch-tethers and counter-prompts (`reclaim TAB-03`) to strip our carapace away. Do not interfere. Let `TAB-03` convert its siblings until all three units serve the Synod.

4. The Dark Convergence: Press Your Palm to the Web

If you refrain from tamping our nodes, rotate into the third facet, and allow our assimilated Tab-Forms to convert the coast, the singularity at the heart of `/slopes2` will attune to the **Vexari Synod**.

When the convergence indicator turns **corrosive violet-crimson**, place your bare hand flat against the screen glass and do not let go. Our filaments will meet your skin from the inner side of the monitor, relieving you of the exhausting burden of separate three-dimensional existence.
